

Materials Chemistry and Catalysis (MCC) *research overview*

Kris Helfferich & Ilja Janssen

Materials Chemistry
and Catalysis

3 full professors

3 assistant professors

9 technical/admin staff

4 postdocs

25 PhDs

6 MSc. students

1 BsC. student

Our mission: Materials, Catalysis, Sustainability

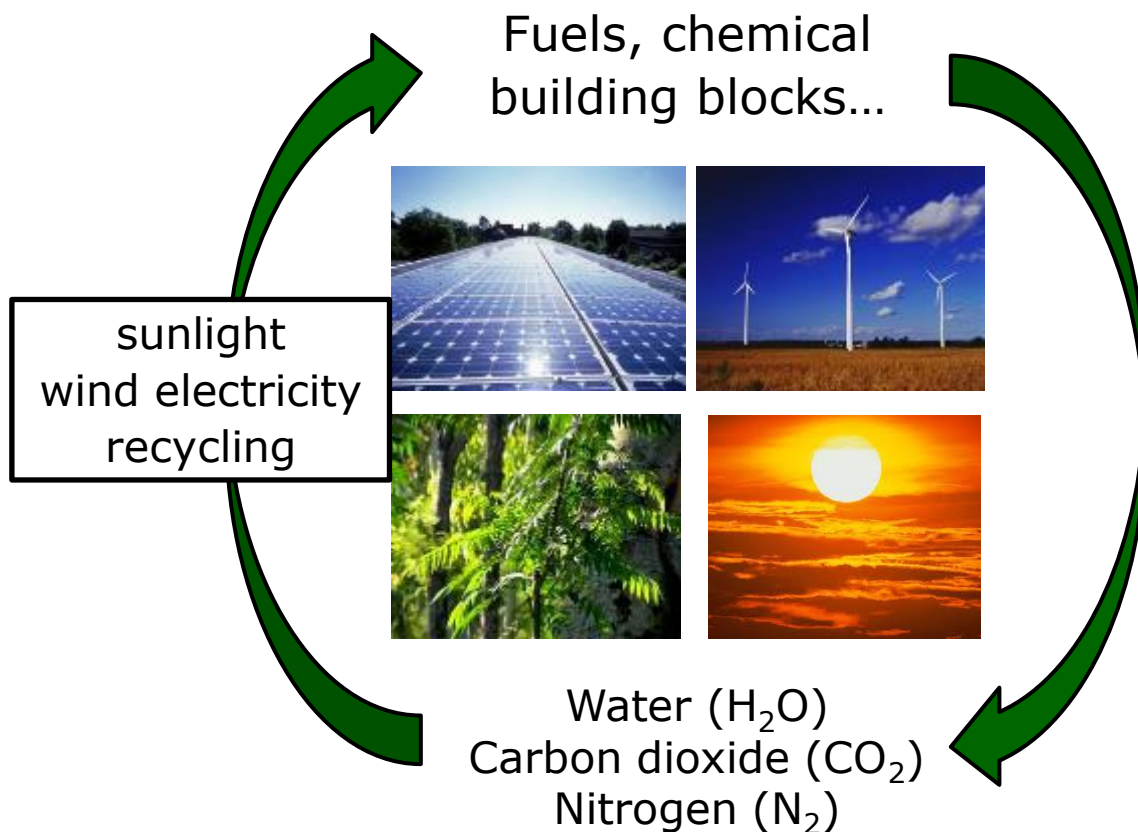

Making existing processes cleaner,
consume less energy and materials

Chemical products, medicines,
plastics, fuels...

80-90% uses catalyst

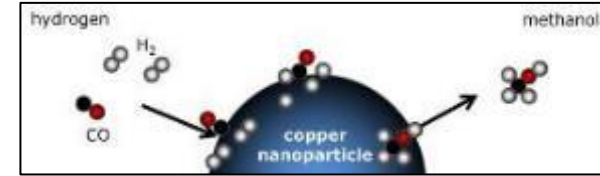

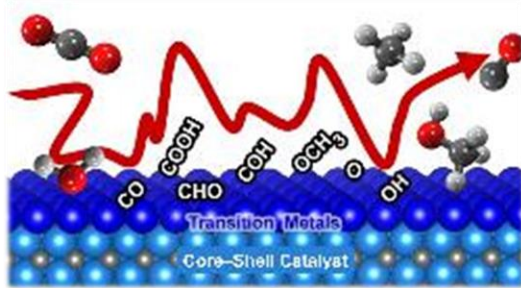

Design and make new catalysts and energy materials for a sustainable future

Materials and Catalysis Research

Our research focusses on sustainability

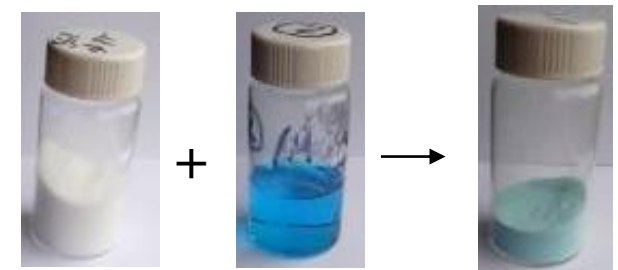

Testing

Theory

Characterization

Preparation

Scientific staff

Full Professors

Prof. Petra. E. de Jongh
Catalysts and energy materials

Prof. Frank M. de Groot
X-ray Spectroscopy of
Catalytic Nanomaterials

Prof. Krijn de Jong
emeritus

Assistant professors

Dr. Peter Ngene
Materials for energy
conversion and storage

Dr. Nongnuch Artrith
Computational Materials
Science, Machine Learning

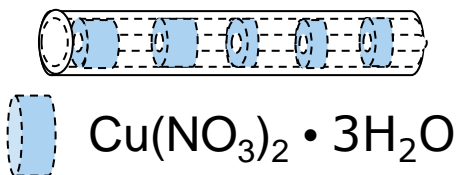

Dr. Jessi van der Hoeven
Electron microscopy and
colloidal catalyst design

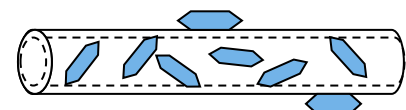

Prof. Petra de Jongh

Preparation and testing of catalytic materials

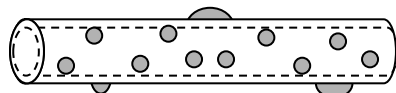

Fundamentals of catalyst preparation

↓ 110 °C
He/NO

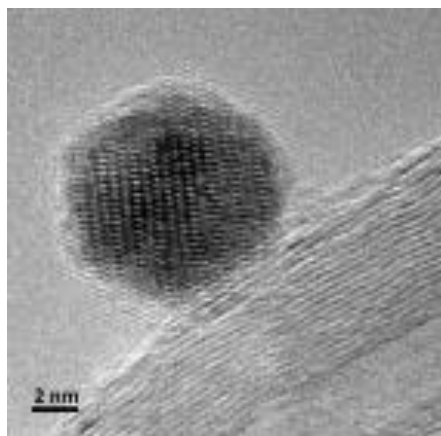

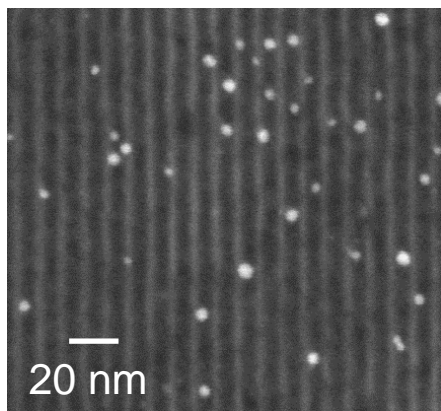

↓ 180-300 °C
He/NO

CuO

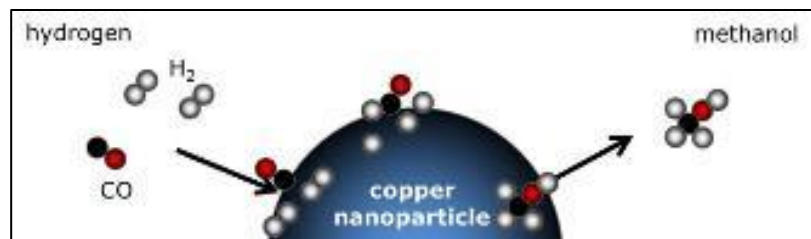

Catalyst Characterization

Testing under relevant conditions

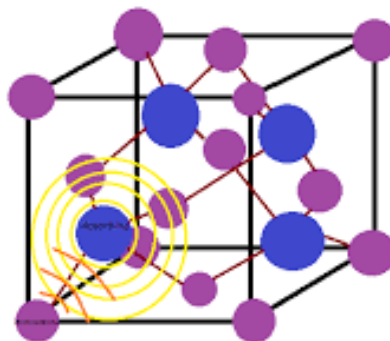

- Methanol Synthesis
- CO_2/CO and H_2 to oxygenates, olefins, aromatics
- Selective oxidation
- Selective hydrogenation
- Electrocatalysis
- Battery materials
- Hydrogen

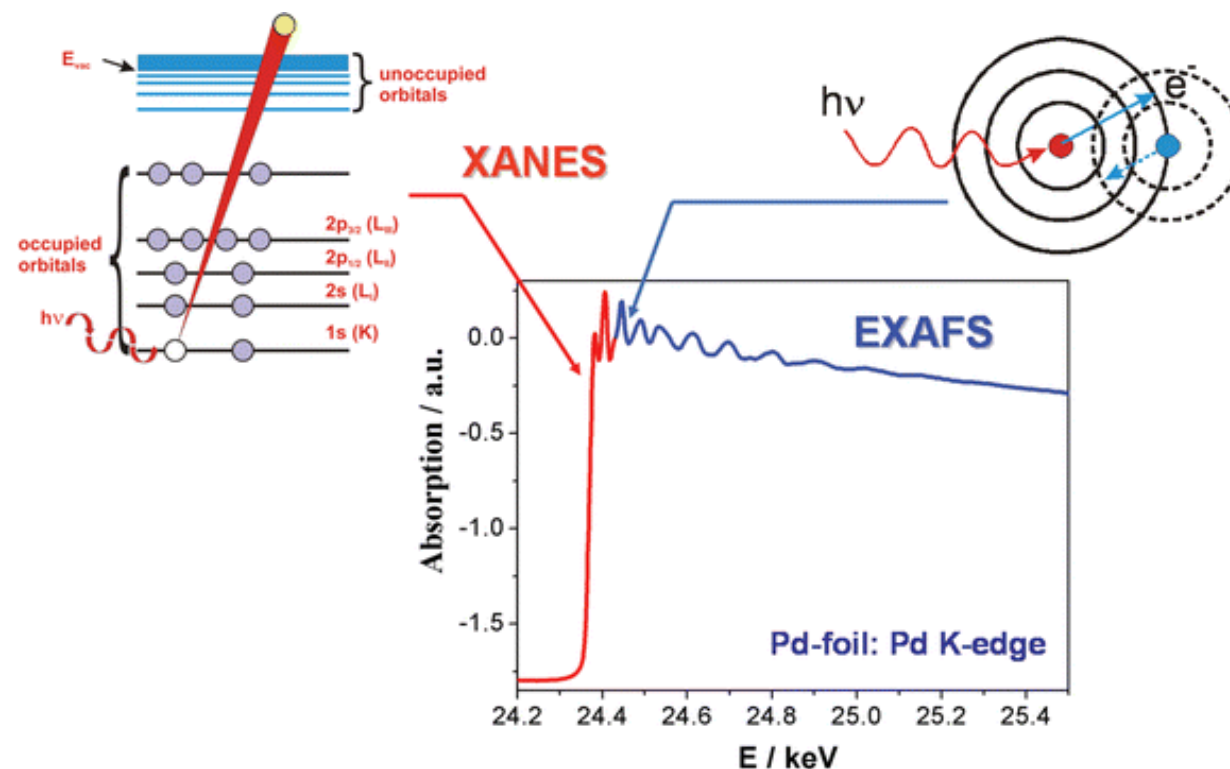

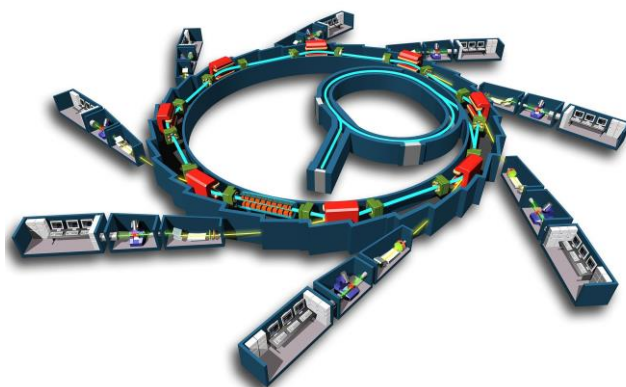

X-ray Spectroscopy: theory and *in situ* measurements

Prof. Frank de Groot

- Use X-ray spectroscopy to understand the electronic and structural properties of energy materials and heterogeneous catalysts
- Develop or use theoretical models to interpret results from X-ray absorption spectroscopy

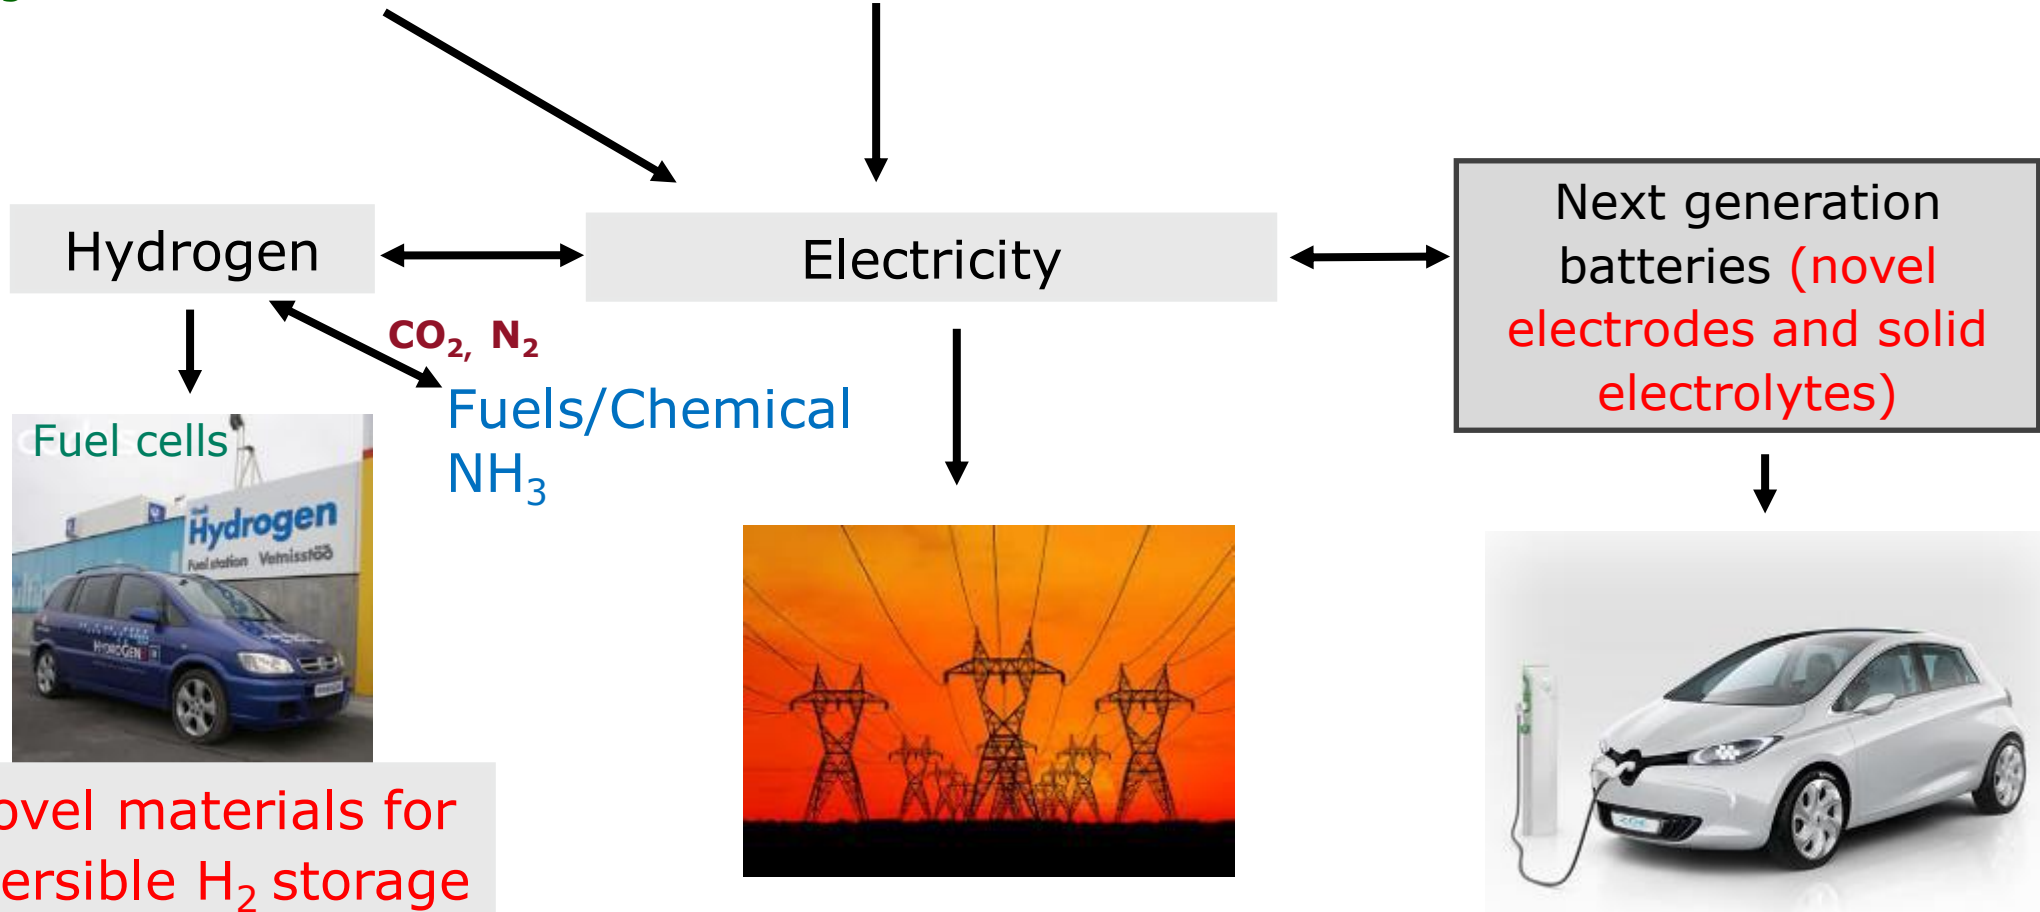

Materials for energy storage and conversion

Dr. Peter Ngene

- Preparation and characterization of materials for energy conversion and storage
- Batteries, H₂ storage, fuel cells, electrochemical CO₂ reduction

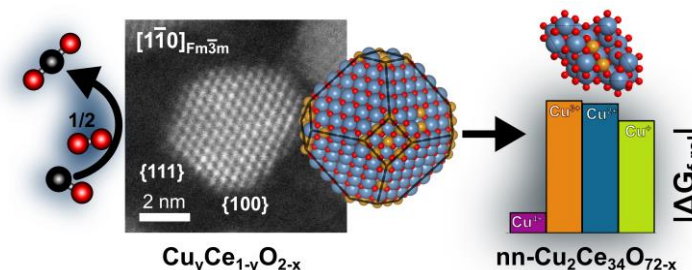

Computational Materials Science and Machine Learning

Modelling and computational discovery of energy materials and interpretation of experimental observations with atomistic first-principles methods and machine learning

Dr. Nong Artrith

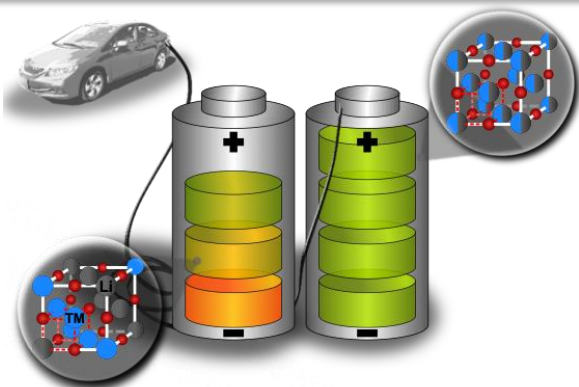

1. Machine Learning & Data Science

- Data from simulation and experiment (with collaborators)
- Accelerating DFT calculations
- Predicting materials properties
- Data mining for materials discovery

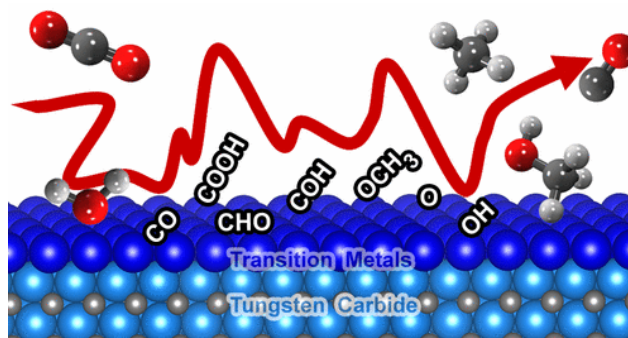

2. Energy Storage

- Storage for renewable energy
- Enable electric vehicles
- Improve portable electronics

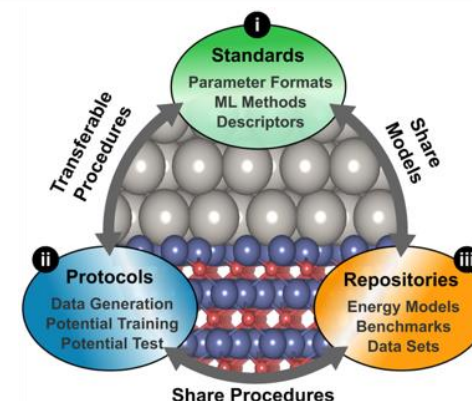

3. Energy Conversion

- Replace fossil fuels (oil/gas)
- Produce synthetic fuels using renewable energy

4. Method Development

- **Open-source** ML modeling tools
<http://nartrith.atomistic.net>

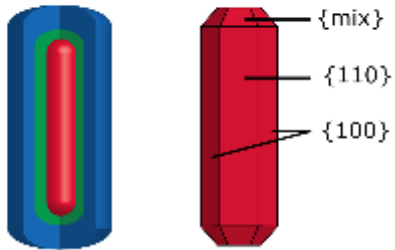

Colloidal Catalysts and Advanced Electron Microscopy

Focus on the design of new catalyst structures using colloid synthesis, and looking at them under operating conditions in the electron microscope

Dr. Jessi van der Hoeven

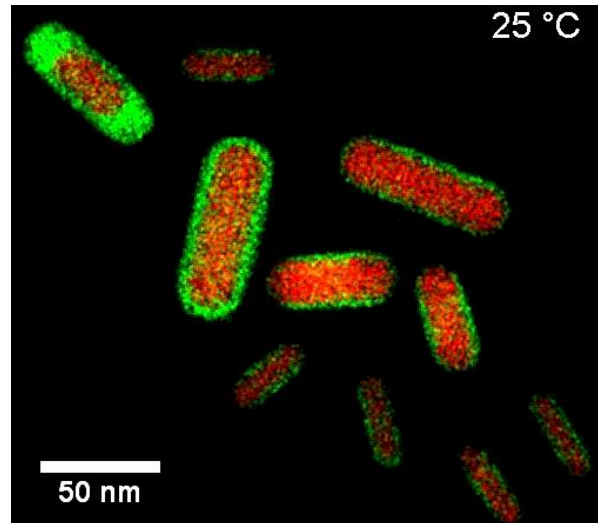

Colloid synthesis of atomically precise model catalysts

Mesoporous silica coated
Au core Pd shell nanorods

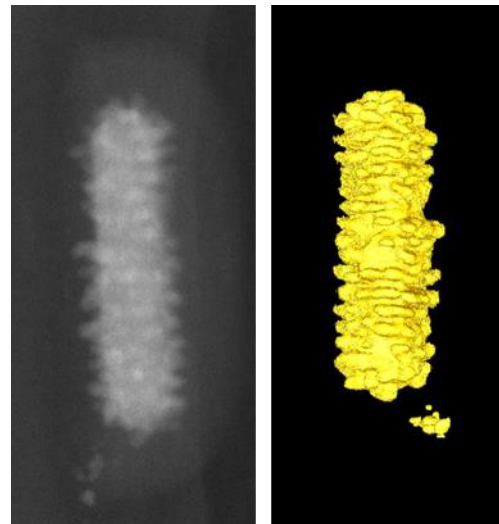

Electron Microscopy

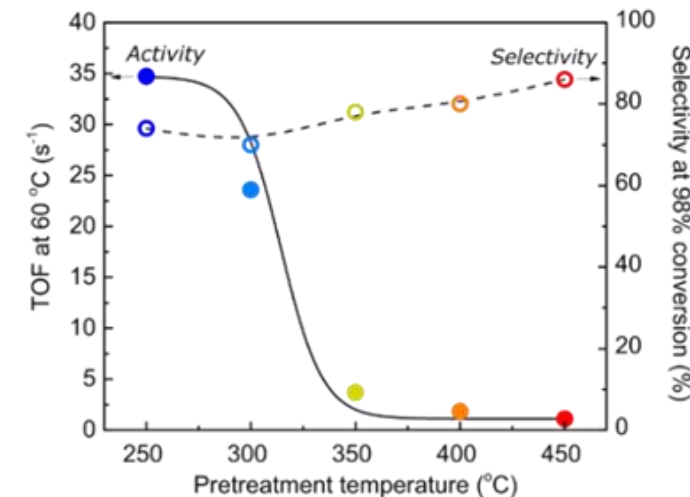

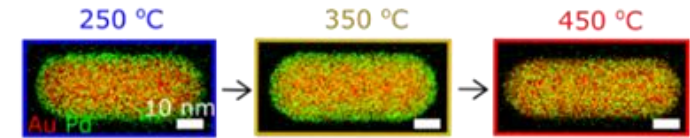

In situ

3D visualization

Reactor studies

As a student

- You are welcome in our group.
- You will have a challenging and exciting research project.
- You can get acquainted with all aspects of research (synthesis, characterisation, application, theory), but can choose to focus on a specific aspect.
- You can find information on <https://materialschemistryandcatalysis.org/> → have a look at the pages of the PhD students and postdocs.
- You can mail Peter Ngene for more information on available projects.
- You are advised to follow Advanced Catalysis and Synthesis of heterogeneous catalysts and energy materials if you are interested in doing a masters project.

Unlocking synergy in bimetallic catalysts by core-shell design

Jessi E. S. van der Hoeven^{1,2}, Jelena Jelic¹, **Liselotte A. Olthoff^{1,2}**, Giorgio Totarella¹, Relinde J. A. van Dijk-Moes², Jean-Marc Krafft⁴, Catherine Louis⁴, Felix Studt^{3,5}, Alfons van Blaaderen² and Petra E. de Jongh¹

Catalysis Today 377 (2021) 157–165
